-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1625

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takano et al, Japanese 02-286643 in view of Jacobsen et al, WO 00/09463 cited by applicants. The English translation of the former is provided. It discloses the reaction of an optically epichlorohydrin of the formula

With an alcohol in the presence of an acidic catalyst to obtain an optically active 1-halogeno-2-hydroxypropyl compound of the formula

Applicants' process involves the use of as the acidic catalyst a metal complex of the formula

If it is known that this catalyst is used as a catalyst in the instant nucleophilic addition to epoxides, then it would have been obvious to use them in the instant enantiomeric nucleophilic additon reaction with epoxides. Jacobsen et al, WO 00/09463 discloses the use of these catalysts in the instant reaction at p. 76-125. Note that the instant general process of claim 2 is taught by Takano et al. see p. 9 of the English translation.
